

/ summary

I don't just run campaigns. I build the data layer marketing runs on, and the systems that act on it.

Marketing technology and analytics leader with **9+ years** owning martech strategy, CRM and marketing automation, campaign performance, DSP evaluation and implementation, and executive reporting. I've worked across real estate, home services, and technology. I've implemented multi-touch attribution twice, built the measurement frameworks under it, and turned that data into decisions that move revenue.

The instrumentation is mine too: tracking plans, event design, the data layer engineering builds against, and consent-aware collection in Segment, GTM, and GA4. I lead implementation audits, and I manage the coordinators and the agency who work inside the stack.

/ focus

martech & ops	Marketing Technology Strategy · CRM Architecture · Marketing Automation · Stack Consolidation · Vendor Management · Lead Lifecycle Management · Process Improvement · Budget Optimization
measurement	Multi-Touch Attribution · Incrementality Testing · Attribution Modelling · Campaign Performance Analytics · Funnel Reporting · Dashboard Development · Executive Reporting · Customer Segmentation · Experimental Design · Channel Mix Optimization
instrumentation	Measurement & Tracking Plans · Tag Management · Event Design · Naming Conventions & Parameter Structures · Data Layer Requirements · Consent-Aware Instrumentation · Implementation Audits & QA · Measurement Governance
media & growth	DSP Evaluation & Implementation · Programmatic Analytics · Paid Media Management · SEO & SEM · A/B Testing · Landing Page Optimization · Generative Engine Optimization
delivery	Product Ownership · Agile Delivery · Stakeholder Engagement · Business Analysis · Client Advisory · UX/UI Analysis

/ experience

Marketing Technology Partner Rohit Group of Companies

Dec 2024 – Present · Calgary / Edmonton, AB

Alberta's largest private real estate developer, with master-planned communities across Calgary and Edmonton. The role covers DSP implementation, measurement and

instrumentation, CRM, marketing automation, mobile product ownership, campaign analytics, and social listening across every brand and community.

- Implemented Segment end to end as the event collection layer, and wrote the tracking plan that governs it: event design, naming conventions, parameter structures, user-state schema, identity resolution, and the destinations feeding CRM, ad platforms, and lifecycle tools.
- Leading the design and implementation of **multi-touch attribution**, connecting programmatic spend across DV360 and AdRoll to pipeline velocity, MQL and SQL outcomes, and revenue across the community portfolio, with marketing mix modelling in progress on the same data.
- Evaluated and shortlisted DSP platforms including StackAdapt, DV360, and Simpli.fi against measurement and performance requirements, then led the implementation of AdRoll and DV360 and defined the tracking specifications and campaign measurement frameworks behind them.
- Wrote the data layer requirements engineering builds against, then verified implementation quality in GTM preview, Tag Assistant, and browser developer tools every release.
- Designed data collection against consent requirements: Cookiebot banner and category logic, Consent Mode v2 default and update states, and consent-gated triggers in GTM. Extended collection server-side with server-side GTM and the GA4 Measurement Protocol where browser-side tags were blocked.
- Built the reporting pipeline in Microsoft Fabric, pulling HubSpot CRM and Google advertising data into it, and the campaign dashboards in Power BI on top. Marketing and leadership get real-time visibility into acquisition ROI and pipeline contribution across communities.
- Built multi-touch behavioural lead scoring in HubSpot, scoring contacts on engagement signals across touchpoints and feeding the routing logic that assigns qualified leads to the right community.
- Increased lead-to-MQL conversion by **25%** through automated omnichannel engagement and social listening in Sprout Social and Brandwatch, while cutting manual monitoring effort by **60%**.
- Improved martech stack utilization by **45%** and reduced vendor spend by **40%** through platform consolidation and vendor realignment, moving budget to the tools that were earning it.
- Built production-grade automation in n8n connecting HubSpot, lead sources, and campaign data to handle lead routing, prospecting sequences, and intent signal processing.
- Served as Product Owner for the My Rohit Homes app, setting the product vision and leading a multi-phase roadmap from discovery through launch. Defined the in-app push and lifecycle messaging requirements, including trigger logic and audience rules.

- Configured and administered Yardi for Rohit Rental Living, integrated it with the wider marketing stack, and built the leasing and lead reporting that runs on top of it.
- Led generative engine optimization for the Rohit Rental Living website, restructuring content and site architecture so AI assistants can parse and cite it. The properties now surface in AI assistant answers to rental search queries.
- Manages a small team of marketing coordinators as direct reports, and owns the external media agency relationship: writes the briefs, sets performance expectations, reviews results against them, and holds the agency to the numbers.
- Sets paid search and paid social strategy across Google Ads and Meta, then optimizes live campaigns against it: audience structure, bidding approach, and creative rotation.

Data & Analytics Marketing Manager

Mosaic Home Services

Jan 2021 – Nov 2024 · Edmonton, AB

Multi-brand home services franchise operator. I was the primary analytics and measurement advisor across the franchise network, advising franchise owners directly on measurement strategy, channel mix, and funnel performance.

- Implemented **multi-touch attribution** in HubSpot, mapping the full lead journey from first programmatic touch through to closed sale, which made channel mix optimization possible and improved MQL-to-SQL attribution accuracy across locations.
- Managed **\$250K+** in paid spend across Google Ads and Meta at **3.8x** ROAS and a **22%** CPL reduction, through continuous A/B testing, audience segmentation, and channel mix optimization.
- Built custom Excel and Google Sheets reporting with **Power Query** and **Apps Script**, automating KPI dashboards across 10+ franchise locations and cutting reporting time by **40%**.
- Acted as the primary analytics advisor to franchise owners, translating funnel data and channel performance into measurement strategies they could act on. A client-facing role across a network of independent operators.
- Built and launched 10+ lead-generating WordPress sites with improved UX and SEO, driving a **35%** lift in inbound leads across business units.
- Designed and maintained campaign and KPI dashboards in Power BI, Looker Studio, HubSpot, and Google Sheets, tracking MQL volume, marketing ROI, team KPIs, and operational performance.
- Rolled out **Aircall** VoIP and an automated SMS quoting system, improving quote response speed by **50%**.
- Built chatbot and lead-qualification flows that cut support workload by **30%** while lifting lead-to-appointment conversion.

- Built behavioural lead scoring and lifecycle stage automation in HubSpot, with routing logic that distributed qualified leads to the right franchise location. Managed a small team of marketing coordinators as direct reports and audited their builds before they went live.

IT Project & Business Analyst

Virala

Jun 2017 - Dec 2019 · Toronto, ON

- Delivered 15+ end-to-end web and mobile projects using agile methods, reducing delivery timelines by **40%** through structured sprint planning and documentation.
- Bridged analytics, marketing, and engineering teams by turning client business requirements into technical specifications, keeping measurement and data continuity intact across platforms.
- Championed UX and UI changes drawn from usability testing and analytics, improving user engagement by **35%**. Implemented Jira and Confluence for sprint planning and delivery tracking.

Digital Project Manager & Marketing Specialist

Virala India Pvt Ltd

Jun 2014 - Jun 2017 · Noida, India

- Client-facing analytics and campaign partner for **Sony, Fitbit, SanDisk, and Gold Coast University**, owning campaign measurement, performance reporting, and optimization recommendations across SEO, SEM, and programmatic.
- Planned and ran 25+ digital campaigns, managing programmatic and paid social against ROAS and CPL with ongoing channel mix and audience testing.
- Built and optimized client e-commerce storefronts on Magento, Shopify, WooCommerce, OpenCart, and custom platforms, owning the product page and checkout experience for consumer electronics retail. Lifted conversion by **3%** across those storefronts.
- Ran keyword research, competitive analysis, and content optimization that raised organic traffic by **40%** across client properties.
